

Six Monthly
Environmental Monitoring Report
Of
M/s. Gujarat Industries Power Company Limited
(Mangrol-Valia Lignite Mine)
Village: Nani Naroli, Ta: Mangrol,
Di: Surat 394110

For the Month of July-2017 to December-2017

Prepared By:

M/s. Greenleaf Envirotech Pvt. Ltd.

304, Kankavati Complex, Singapore Cauzway Road,

Katargam, Surat.

Introduction:

M/s. Gujarat industries power company limited (GIPCL) had already set up lignite fired pit head 250 MW (2 X 125 MW) thermal power plant in phase 1st and company has expanded the capacity has expanded the capacity from 250 MW to 500 MW i.e. 250 MW was developed in second phase at NaniNaroli, Taluka Mangrol. GIPCL has developed its own captive lignite mines at Mangrol in surat District & valia of Bharuch district to meet the fuel supplies for above power capacity.

Total total mining lease area of Mangrol- valia Lignite Mine is 2080 Ha, the total estimated extractable reserves of 2080 Ha is 199.87 Million. The average stripping ratio in the area is about 2:8:36 for Lignite in Tonnes to cubic meter of waste. These reserves are sufficient to feed 250 MW power plant at an annual rate of 1.8 Million tones of Lignite requirement. Hence GIPCL is developing Mangrol- valia Lignite Mine for an annual Lignite production of 4.2 Million tones annum (MTPA).

As per the status related to Environment & Ecology , it is necessary to study the adverse environmental impacts likely to be caused in and around the Mining site before, during & after the execution of the project and provide necessary mitigative and control measures, so the project authority is required to prepare a detailed Environmental impact assessment (EIA). Report and environment plan (EMP) and obtain necessary clearance from the state pollution control board (GPCB) and Ministry of Environment & Forest.

PREFACE

Consciousness at national level in the industrial sector is increasing day by day with the focus on environment and sustainable development. A good environmental management policy requires a consent efforts to analyses and monitors various operations and processes to generate and transmit this information to the inspecting authority.

As per the air & water consent orders issued by Gujarat Pollution Control Board (GPCB) Gandhinagar & also as per the Environment clearance certificate issued by Ministry of Environment & Forest (MoEF), Govt. of India, New Delhi. It is mandatory to get the samples of Air/ gaseous Emission & effluent, collected and analyzed from an approved laboratory. Bimonthly & its analysis report should be submitted to GPCB & six monthly analysis submitted to MoEF.

Gujarat industries power company limited(GIPCL) , Mangrol- Valia Lignite Mines has Mangrol pit situated at Tal. Mangrol, Dist. Surat & Valia pit situated at Ta. Valia, Dist. Bharuch. This company engaged in the generation of electricity . The industry had awarded contract for monthly monitoring and analysis to M/s. GREENLEAF ENVIROTECH PVT. LTD., surat.

M/s. GREENLEAF ENVIROTECH PVT.LTD. is a leading environmental Consultancy firm situated at Siganpor- Cauzway road, Katargam, Surat. And is approved as Schedule -II environmental auditor by Gujarat Pollution control board. M/s. GREENLEAF ENVIROTECH PVT.LTD. has its own full fledged laboratory to measure the pollution parameters belongs to Air, water, Hazardous etc.

Methodology for Environment Monitoring:

M/s. Gujarat industries Power Company Limited has awarded the work of monthly environmental monitoring of its Mangrol-Valia Lignite Mine to Greenleaf Envirotech Pvt. Ltd. Greenleaf team visits the Mangrol – Valia Lignite Mines bimonthly to carry out environmental monitoring.

Greenleaf team follows the following methodology for carrying out methodology for carrying out monitoring of various components.

Water & waste quality monitoring:

Ground and surface water samples are collected at their source point using grab sampling. Surface and ground water sample are collected from core and buffer zones located near the mining area. Preserved samples are brought to Greenleaf laboratory for analysis. For sampling & analysis methods various IS & APHA methods are followed. The samples are analyzed for physico-chemical and bacteriological properties mainly.

Ambient air quality monitoring:

The wind direction and wind speed is monitored first and based on that sampling stations for ambient air quality monitoring are installed. The location are chosen such that at least one station falls in opposite wind direction from all stationary sources(Mining Area). The other stations are installed in two arrays. First array comprising minimum two stations located at approx. 120° and at a distance of approx. 2 Kms. from nearby stationary source falling in the wind directions. The second array comprising minimum 2 stations located in wind directions. Also at two stations are installed in the nearby population area falling in the wind direction. The samples are collected using Respirable dust sampler and fine particulate sampler for 24 hours, preserved and brought to Greenleaf's laboratory for analysis. For sampling & analysis methods IS 5182 & CPCB manual is followed. The main pollutants analyzed are PM₁₀, PM_{2.5}, sulfur dioxide, oxides of nitrogen & carbon monoxide.

Weather Monitoring:

Monitoring station for weather is selected based on Wind direction. The station is so selected that it remains unobstructed from upcoming wind. The micrometeorological data is collected on ambient temperature, humidity, wind speed, and direction on hourly basis for 24 hours. For this monitoring IS 8829 is followed. The equipment used are wind wane, anemometer and thermo hygrometer.

Noise level Monitoring:

The main sources of noise are lignite handling and transportation equipments and systems in the mines. The noise level is monitored in the immediate vicinity of the source. Then the noise level is monitored at the locations falling in the villages in core and buffer zones of mines. Two sets of data are collected for day time and night time monitoring. The noise level is monitored using digital sound level meter.

Dust fall Monitoring:

The dust fall resulting from mining and handling activities of lignite is monitored at several locations in the core and buffer zones. Large and liquid particles (typically greater than $10 \mu\text{m}$ in aerodynamic diameter) are collected via gravitational settling in an open mouth container for a period of the month. The container is washed with a known volume of distilled water, which is filtered and then evaporated. The mass of insoluble particles are determined by the weight gain of a crucible after evaporation. Total mass gain is measured gravimetrically. The dust fall is measured using jars as per the standard practice as per IS-5182.

Scope of work

1) Water & Waste water quality monitoring:

Sr.No.	Location	No.	Frequency	Parameter
1	06 Nos. Bore well water sample located both in Valia Pit	06	Bimonthly	Physico-Chemical, Heavy Metals, Biological & Microbiological parameter
2	06 Nos. Bore well water sample located both in Mangrol Pit	06	Bimonthly	Physico-Chemical, Heavy Metals, Biological & Microbiological parameter

2) Ambient Air Monitoring:

Sr.No.	Location	No.	Frequency	Duration	Parameter
1	8 Nos. within the radius of 10 km from the core zone	8	Bimonthly	24 hrs.	PM ₁₀ , PM _{2.5} , SO ₂ , NOx

3) Dust Fall Measurement:

Sr.No.	Location	No.	Frequency	Duration	Parameter
1	8 No. of location within the radius of Core & Buffer Zone of Valia Pit	8	Bimonthly	1 month	Dust fall

4) Weather Monitoring :

Sr.No.	Location	Frequency	Duration	Parameter
1	1 No. at Mining area of Mangrol Valia Lignite Mine	Bimonthly	24 hrs.	Dry & wet Bulb temperature, Relative humidity, Wind speed, & Direction, Temp., Atmospheric pressure, rainfall

5) Noise Monitoring:

Sr.No.	Location	Frequency	Duration	Parameter
1	8 No. at various location in plant premises	Bimonthly	2 Min/ Location	Day & Night Noise Level

Work order No: SLPP/Mines/Envt.Monitoring 2017-18/11 Dated 15.07.2017

Monthly Variation in July-2017-December-2017
